

TURF MAINTENANCE CHECKLIST

WEEKLY MAINTENANCE

- Mow the turf to maintain a height of 1.5 to 3 inches, depending on the grass type.
- Water the turf deeply, ensuring the soil is moist but not saturated (about 1 inch per week).
- Inspect for signs of pests or diseases and address them promptly.

MONTHLY MAINTENANCE

- Aerate the turf to relieve compaction and improve drainage (more frequently for heavy traffic areas).
- Fertilize with a slow-release nitrogen fertilizer to promote healthy growth.
- Apply a weed control treatment to prevent unwanted growth.

SEASONAL MAINTENANCE

- Overseed thin areas in early fall or spring to encourage thick growth.
- Apply a pre-emergent herbicide in early spring to prevent weed seeds from germinating.
- Prepare the turf for winter by lowering the mowing height and ensuring it's clear of debris.

ANNUAL MAINTENANCE

- Conduct a soil test to determine nutrient needs and pH balance; amend the soil accordingly.
- Schedule a professional turf health assessment to identify any long-term care needs.
- Replace any damaged or dead patches with new sod or seed.

GET IN TOUCH FOR ALL YOUR PATIO AND LANDSCAPING NEEDS

Whether you have questions about our patio maintenance tips, need help planning your landscaping, or want a quote for a custom project, we're here to help! Our team at K&K Landscaping is ready to bring your outdoor vision to life with expert services and advice.
